

Professional PELT entry unit

Art.-Nr. 501655

Seite 1 von 2

With the PELT you have everything in the box. In addition to the backup power supply for an emergency, it is also possible to control configuration and deletion functions via the PELT and this is extremely straightforward: First of all the PELT is connected to the door system via the chip key hanging on the data cable and a button is activated. Then the key to be configured is inserted. Combi codes from the key and keypad code are now configured via the keypad. If a key is lost, it can be deleted from the locking system later on with the assistance of the keypad code.

Technologies

- Use with EL and ELT entry units
- For single deletion of ABUS Seccor chip keys (operated in CLX, ZL and control units with EL) and for configuration and testing of evaluation units
- For external electricity supply

Technical data - Professional PELT entry unit

Additional functions	External power supply from ABUS Security Center locking systems
Colour	white
Height	30 mm
Housing material	plastic
Length	113 mm
Max. humidity	80 %
Max. operating temperature outdoors	40 °C
Min. operating temperature outdoors	0 °C
