LOUD AND STRONG

With two locking points and a loud alarm function, this window drive thwarts burglars.

If you often exit your house through the patio door, you need a convenient way to securely lock the door behind you. The radio window lock drive not only has a 110 decibel loud alarm signal function, but also two locking points that can withstand a pressure resistance of one ton each. And while burglars have a visibly hard time, you can easily lock your patio door at the touch of a button. The mechanical closing function is retained after assembly. Optionally, you can also open the door using a programmable code.

Technologies

- Optimum ease of use thanks to optional wireless remote control and/or wireless keypad
- Maximum security through AES 128 bit encryption
- 3D alarm sensor system triggers a 110 dBA alarm as soon as a break-in attempt is detected
- Locking bars with two locking points with pressure resistance of more than one tonne
- Fully automatic pairing of the power unit
- Mechanical closing remains possible, electronic control works even when the locking cylinder is pressed in thanks to dual drive

Operation and use

- Opening and locking the patio door at the push of a button or by entering a code

Variants

- Colours: brown, white, silver
