

Penlight TL-500

Seite 1 von 2

Light, small, but brings a lot of light into the darkness:

Our TL-500 pen torch is made of a special aluminium that is also used in aircraft.

This means that the pen torch can withstand vibrations without any problems. Its size allows it to easily fit into any pocket or handbag. Thanks to the neodymium magnet in the base of the pen torch, it can be firmly attached to any metallic object, such as a car bonnet. It therefore provides a reliable source of light when repairing a specific area of your car. The pen torch has two light beams. The main light can be set to 500, 300 or 100 lumens, while the top light can be dimmed from 200 lumens to 80 lumens.

Technologies

- Main light positioned on the side of the torch with COB beam emitting 500 lumens – dimmable to 300 and 100 lumens
- Spotlight on the top of the torch with 200 lumens – dimmable to 80 lumens
- Strong neodymium magnet in torch base for attaching the torch to metallic objects
- Running time of up to 10 hours
- Protected against rain – splash-proof according to IPX4
- 3 x AAA batteries required

Operation and use

- Perfect for use when camping, in basements and when working on fuse boxes
 - A strong magnet in the torch's base make it easy to attach – especially when repairing cars
 - Provides safety in the dark thanks to its powerful luminosity
