## MicroSD card, 32 GB

Art.-Nr. TVAC41100 Seite 1 von 1

The microSD card is an extremely compact storage card with a storage capacity of 32 GB and a write and read speed of up to 98 MB/s (Class 10). This makes the card, which is smaller than a fingernail, an optimal storage medium for local recording in an IP camera and allows it to act as backup storage. The card meets the high standards required for the reliable recording of video data in 24/7 operation, even in adverse operating conditions.

## Technologies

- Ideal for storing video data during long-term continuous operation
- High write speed of up to 100 MB/s (class 10)
- Tested for adverse operating conditions: shock-resistant, waterproof and able to withstand extreme temperatures

## Technical data - MicroSD card, 32 GB

| Dimensions                 | 15 x 11 x 1,0 mm |
|----------------------------|------------------|
| High-speed class           | Class 10         |
| Max. operating temperature | 85 °C            |
| Max. reading speed         | 98               |
| Min. operating temperature | -25 °C           |
| Storage capacity           | 32               |
